farming

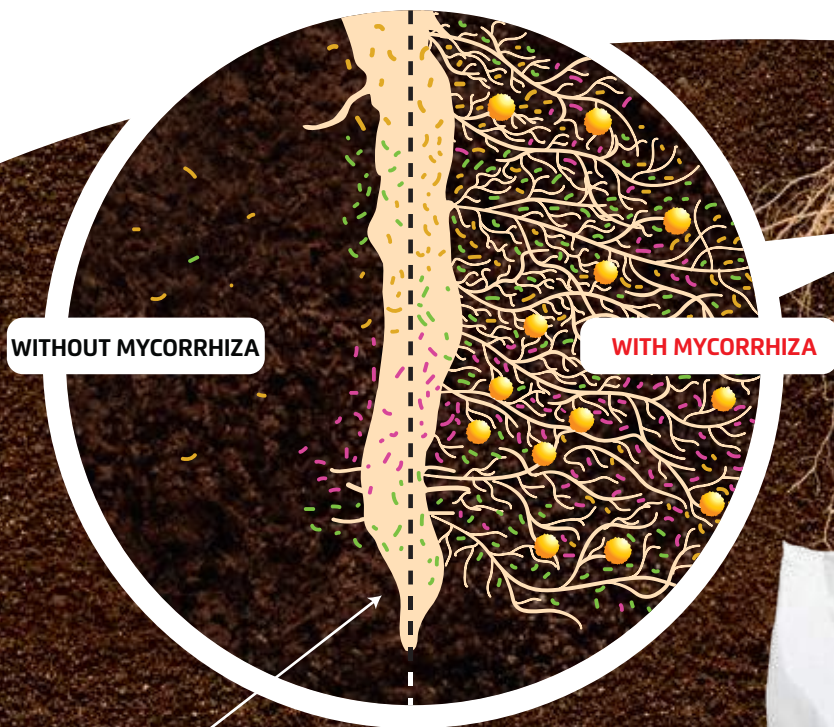

# Team

MYCORRHIZA

**TEAM** is a mycorrhizal product specifically formulated for extensive farming.

The product contains in-vivo reproduced spores of mycorrhiza from the exclusive collection of Atens, which ensure the best quality inoculum in the market.

Root

Quality, care, production and balance.

Control

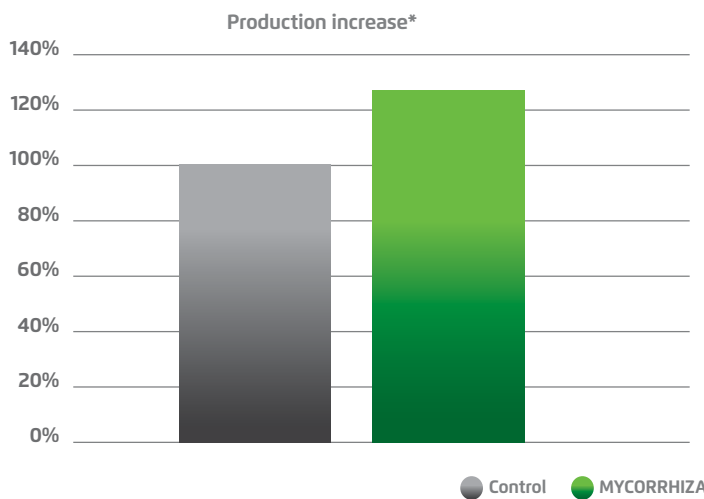

Mycorrhiza

# Benefits

- Increases the radicular system of the plant (better availability of nutrients and water).
- Improves the plant health (more resistance against pathogens and stress situations).
- Proportionates a balanced growth of the crops (regulatory effect).
- Boosts the production and the quality of the fruits.
- Enhances the content of phytochemicals in the plant (vitamins, polyphenols, carotenoids...).

Study conducted in collaboration with **ACOPAEX** in industrial tomato crops.

Product suitable for organic farming.

1 Kg

## Application

**TEAM** is indicated for any kind of extensive farming. The recommended timing for application is during the initial phase of plant development. The aim is to guarantee an early colonization of the roots with mycorrhiza.

### HORTICOLA:

Dissolve the content in water and apply by any type of drip irrigation system.

**Composition:** 1000 spores/g  
**Recommended dose:** 1 Kg/ha during the initial phase of the cultivation.  
**Packaging:** 1 Kg bags

Fertilizer product registered under Spanish law with number **F0003883/2029**.

### Mycorrhiza strains:

- Rhizoglomus irregularare BEG72
- Funneliformis mosseae BEG234

### MICROGRANULO:

Apply using a microgranulator during the transplant process.

**Composition:** 50 spores/g  
**Recommended dose :** 10-15 Kg/ha during transplant  
**Packaging:** 4 Kg bags

Fertilizer product registered under Spanish law with number **F0003884/2029**.

### Bacteria strains (only HORTICOLA):

- Bacillus megaterium MHBM77
- Bacillus megaterium MHBM06

**TEAM** is a product developed by **ATENS**, and produced using a natural methodology through our own in-vivo replication system.
